IMPORTANT NOTE!

3D Prophet 9700 Series power connection requirements

⚠️ 3D Prophet 9700 Series must be connected to your PC's internal power supply. A 300W power supply or greater is recommended to ensure normal system operation where a number of other internal devices are installed.

Complete the instructions for removing the old video card and software (found in the *User Manual*).

Use the supplied power extension cable to connect 3D Prophet 9700 Series to the power connector on your computer's hard drive:

1. Disconnect the power cable from your hard drive's power connector.

2. Connect the power extension cable's **A** plug to 3D Prophet 9700 Series power connector, as shown (the cable may already be connected to the graphics card).

3. Connect the **B** plug to the power supply connector.

4. Connect the **C** plug to your hard drive's power connector.

5. After locating the AGP slot and removing the metal cover (if necessary):

   - Align your graphics accelerator card with the AGP slot.

   - Push the card in until it is firmly locked in place.

6. Replace the screw to fasten the card in place, then replace the computer cover.

7. Plug the monitor cable into your card.

8. Switch on your computer and monitor.
