I have installed my 3D Prophet board on my PC and some games don't work. What's the problem?

The first time you had installed your game, the game video settings files where installed to fit with the graphics card installed in your PC at this moment, which was not your 3D Prophet. As the video settings files may be different for your 3D Prophet, you have to reinstall the games to have them fitting with it.

In case you find bugs in some games, please check on the game publisher website whether they have released patches to update your game version.
