

## **What is Hydravision technology?**

Hydravision technology improves display management and facilitates better control of the Windows environment. It controls both your PC monitor and your television screen and allows two different images to be displayed at the same time, such as a DVD and your office work.

- Resolution and refresh rate adjustment for both screens.
- Repositioning of windows with a single click. - Creation and management of several Windows offices at once (9 max)
- Creation of keyboard shortcuts for the most frequently used functions.
- Settings management according to applications.
