I notice certain issues with the version of Traktor DJ included with my DJ Console MAC.

First, make sure that your computer meet the minimum system requirements as indicated on the box.

Next, apply the software update available from Native Instruments:

http://www.native-instruments.com/index.php?traktorhupdates_us

** Registration of the software is required to download the update.

If you are using MAC OS 10.4.x (Tiger) you will also be required to install the patch for this particular OS, available from our support site:

ftp://ftp.hercules.com/sound/exe/DJConsole/THC101U_RC1_OSX_Update.zip

You do not need to install this patch if your Traktor DJ Console version is already 1.0.1.031. You can check the version by clicking on the "**?**" and selecting the ABOUT tab (in Traktor DJ).
