

## How can I improve the performances of Traktor DJ Hercules Edition?

First make sure to install the latest update for Traktor available from our support site

### Latency

If you experience clicks, pop or dropouts during audio playback, adjust the **LATENCY** from the **Preference** menu of Traktor:

## Playlists

Traktor is not able to import large music libraries from iTunes. Unfortunately, as this is done on startup, it may lead to application crash.

To avoid this you can:

- 1) Rename the iTunes music library folder in order to fool Traktor into thinking the Music library is empty. Once the Traktor is loaded, go in the **SETUP > BROWSER** menu and uncheck the box for **Import on Startup**
- 2) You can split your music collection into several folders that you will move away from the main iTunes music library folder. Add a new folder (to the iTunes library) each time Traktor is launched by using the **IMPORT NOW** function (**SETUP > BROWSER**). This will ensure the music library is not too large for the software to be imported at once.

## Master Tempo

Using the MASTER TEMPO function of Traktor requires a lot of processor power, so if your computer is close to the minimum system requirements, you may want to refrain from using this functionality.
