## How can I use Virtual DJ with my computer's integrated speakers or soundcard?

Virtual DJ LE, included with **Hercules DJ Console Rmx,** is a dedicated version specially configured to exclusively use the Rmx integrated soundcard. It is necessary to connect speakers directly to the DJ Console outputs.

In order to connect regular computer speakers or a home sound system to **Output 1-2** on the back of the Rmx, a **RCA male to 3.5mm female adapter** may be required**.**

The DJ Console's soundcard was built specifically for audio and DJ applications and will provide better performances than your computer's soundcard.

Virtual DJ Pro allows the use of multiple sound cards configuration.
