

How can I use Virtual DJ with my computer's integrated speakers or soundcard?

Virtual DJ LE, included with **Hercules DJ Console Mk4**, is a dedicated version specially configured to exclusively use the Mk4 integrated soundcard. It is necessary to connect speakers directly to the DJ Console outputs.

You can use either the mini-jack or RCA connectors of **Output 1-2** to connect regular computer speakers or a home sound system on the back of the Mk4

The DJ Console's soundcard was built specifically for audio and DJ applications and will provide better performances than your computer's soundcard.

Virtual DJ Pro allows the use of multiple sound cards configuration.
