

How can I verify that my DJControl Instinct is correctly installed on my MAC computer?

Once installed, the DJControl Instinct should normally be enumerated by **System Profiler (Application > Utilities)**:

The DJ Control will also be present in **Audio/MIDI SETUP** (also in **Applications > Utilities**):

Both **Hercules DJControl Instinct** and **Hercules DJControl Instinct Aggregate Device** should be present. This is normal and necessary for some DJ software to use all the outputs of the **DJControl Instinct**.

Under **MIDI Devices**, you should notice the **DJControl Instinct** as a device.

The **DJ Console Control Panel**, should also appear on the desktop

The **ABOUT** tab provides information about the drivers currently installed. If you ever need to contact our technical support, be sure to have this information at hand.
